TUTORIAL 7 : Write a C++ program using multiple inheritance to calculate an employee's gross salary.

NAME – Arenyu Bahiwal

BATCH – SY 2

DIV – A2

```
#include <iostream>
using namespace std;

class Employee {
public:
   string name;
   void getName() {
      cout << "Enter name: ";
      cin >> name;
   }
};

class Salary {
public:
   float basic, hra, da;
   void getSalary() {
      cout << "Enter basic, HRA and DA: ";
      cin >> basic >> hra >> da;
   }
};

class Payroll : public Employee, public Salary {
public:
   void display() {
      cout << "Name: " << name << endl;
```

```
        cout << "Gross Salary: " << basic + hra + da;
    }
};

int main() {
    Payroll p;
    p.getName();
    p.getSalary();
    p.display();
    return 0;
}
```

Output

```
Enter name: Arenyu
Enter basic, HRA and DA: 400 500 800
Name: Arenyu
Gross Salary: 1700
```
